

Career Plan — Aarav Mehta

Month: May 2026 · Class 11-A PCM · Vidya International School, Indore · Roll No. V2026-0042

Prepared by Pathwise AI · Reviewed & Approved by Ms. Priya Iyer (Pathwise Consultant)

Where Aarav stands today

Aarav is a consistent top-quartile performer in Mathematics (current year average 86%), with a notable upward trend in Physics over the last two months (62% → 78%). Chemistry has shown some volatility, currently at 64%. He has self-declared interests in coding and the Robotics Club, and his class teacher has consistently noted strong analytical reasoning. Attendance is at 94% — a healthy indicator. The interest form filled in March highlighted '**Software Engineer**' as his self-aspiration, while parental aspiration noted '**IIT Engineer**' — these are aligned, with a useful refinement opportunity around specific engineering branch.

Career direction we're suggesting

Primary Hypothesis: STEM-Engineering — Computer Science (**Confidence 0.82**)

Evidence	Why it matters
Mathematics 86%	Strongest predictor of CS engineering aptitude
Physics 62 → 78	Shows learning agility, important for engineering
Coding + Robotics Club	Interest signal aligned with academic strength
Self-built Python script	Practical application beyond syllabus

Secondary Hypothesis: STEM-Engineering — Electronics & Communication (**Confidence 0.55**). Reasonable backup if JEE rank doesn't fetch CS at top colleges. Aligns with Robotics Club.

What we're NOT recommending and why: Medicine (PCB) — requires Biology, which Aarav doesn't currently take. Pure Mathematics (BSc) — limits career flexibility. Mechanical/Civil — possible but interest signals point toward CS.

This month's focus (May 2026)

Theme: Stabilize Chemistry while consolidating Physics gains; kick off advanced Mathematics for JEE syllabus.

Week	Dates	Focus	Key milestones
1	1-7 May	Chemistry recovery	Organic: Hydrocarbons (NCERT + 30 problems); Physics Rotational Motion (
2	8-14 May	Physics momentum	Rotational Motion problem-set; Functional Groups; Application of Derivatives
3	15-21 May	Integrated mock prep	Mid-term style mock; Chemistry weak-topic review from Mock 4
4	22-31 May	Stretch + recovery	Advanced JEE Maths; Chemistry organic mechanism revision; rest + peer stu

Total weekly study load target: 14-16 hours (school + coaching + self-study; sustainable for Class 11).

Subject-wise strategic notes

Subject	Now %	May goal	Strategy
Physics	78	80+	Maintain momentum; new chapter without losing Mechanics grip
Chemistry	64	70+	Focus 35% of self-study time here; Organic priority
Mathematics	86	88+	Move to JEE-prep texts (RD Sharma → Cengage)
English	78	78+	Maintain; non-priority for engineering path
Computer Science	91	91+	Maintain; Coding Club is the multiplier

Term 1 progress snapshot

Goal: 85%+ in all three PCM subjects.

Status: Maths ✓ (86) · Physics ■ (78, on track) · Chemistry × (64, attention needed)

Watch-outs

Chemistry: If Mock 5 doesn't show 70%+, consider 1-month focused tutoring intervention.

Sleep pattern: Teacher flagged tiredness; ensure no overloading on coaching schedule.

JEE coaching choice: Performance there should be tracked vs school marks. We'll have a 1:1 in mid-May.

Suggested conversations

For parents:

"Your interests and your marks are pointing in the same direction — let's not over-engineer this; trust the trajectory."

"Computer Science vs Mechanical — let's keep that conversation light for now; this year is about consolidation, not branch-locking."

For Aarav:

"Chemistry is fixable — 6-8 hours of focused organic chemistry will move this. It's not a talent issue."

"Your Physics turnaround is impressive — that's the kind of recovery that matters more than starting marks."

What we'll track next month

Mock Test 5 & 6 results · Chemistry topic-level diagnostic · Coding Club project progress (interest signal continuity) · Sleep / engagement trend from class teacher

Plan version & comparison

Version: v2 (May 2026)

Compared to last month: Chemistry focus increased from 25% → 35% of self-study; Physics moved from 'recovery' to 'consolidation'.

Next refresh: 1 June 2026.
